

SCHOOL OF COMPUTER SCIENCE AND ARTIFICIAL INTELLIGENCE

Department of Computer Science Engineering

Course Code: 23CS002PC304

Course Title: AI Assisted Coding

Year/Sem: III / II

Assignment Number: 15.1 / 24

Name: O.Narasimha Raju

HT No: 2303A53034

Batch: 46

Lab Objectives

- Understand RESTful API design
- Implement CRUD operations using AI assistance
- Develop backend services
- Improve API reliability and structure

Task 1: Student Records API

```
students = []
```

```
def get_students():  
    return students
```

```
def add_student(student):  
    students.append(student)
```

```
def update_student(index, data):  
    students[index] = data
```

```
def delete_student(index):  
    students.pop(index)
```

Task 2: Library API

```
books = []

def add_book(book):
    books.append(book)

def get_books():
    return books

def delete_book(index):
    books.pop(index)
```

Task 3: Employee Payroll API

```
employees = {}

def add_employee(id, salary):
    employees[id] = salary

def update_salary(id, salary):
    employees[id] = salary

def delete_employee(id):
    employees.pop(id, None)
```

Task 4: Food Ordering API

```
orders = []

def place_order(order):
    orders.append(order)

def get_orders():
    return orders

def cancel_order(index):
    orders.pop(index)
```

Conclusion

AI-assisted backend development simplifies API creation.

Understanding REST principles is essential for building scalable applications.
